CBSE CLASS X • INFORMATION TECHNOLOGY (SUBJECT CODE 402)

UNIT 1: DIGITAL DOCUMENTATION (ADVANCED) — CHAPTER 3

ADVANCED FEATURES OF WRITER — STRUCTURED REVISION & NOTEBOOK NOTES

Syllabus Sub-Unit 3 Complete Coverage • Table of Contents • Templates • Track Changes & Review • Zero Over-Shortening

---

1. Table of Contents (ToC) & Hierarchy of Headings

Definition: A Table of Contents (ToC) is an organized list or table placed at the beginning of a document, book, or report that lists chapter titles, section headings, and subheadings alongside their starting page numbers.

- **Hierarchy of Headings:** Clearly defined tiered levels of headings where higher-level styles represent primary topics and lower levels represent sub-sections:
  - *Level 1 (Heading 1):* Major units, titles, or book chapters.
  - *Level 2 (Heading 2):* Sub-topics and sections within a Level 1 chapter.
  - *Level 3 (Heading 3):* Sub-subsections within a Level 2 section.
- **Default Evaluation Scope:** By default, LibreOffice Writer evaluates up to **10 levels of headings** (Heading 1 to Heading 10) when building a ToC.
- **Why Automated ToC Over Manual Typing?**
  1. *Automated Accuracy:* Extracts correct headings and page numbers programmatically without manual typing errors.
  2. *Easy Maintenance:* Automatically updates all changes in titles, heading levels, and page numbers with one click.
  3. *Hyperlinked Navigation:* Each entry acts as a clickable hyperlink (**Ctrl + Click**) jumping directly to the referenced page in the document.
- **Structure of a Standard ToC Entry Line:**
  1. *Chapter/Section Number:* Hierarchical numerical prefix (e.g., 1.2).
  2. *Entry Text:* The actual heading title copied from the document.
  3. *Tab Leader Character:* Dotted line (or dashes/solids) filling the horizontal gap between heading text and page number.
  4. *Page Number:* Commencing page number where that heading starts.

2. Creating, Customizing, Updating & Deleting a ToC

A. Step-by-Step Procedure to Create a ToC:

Step 1: Apply appropriate paragraph heading styles (Heading 1, Heading 2, etc.) to all titles and section headings across your document.

Step 2: Position the text cursor where the ToC should appear (usually on a blank page after the title page).

Step 3: Choose **Insert** → **Table of Contents and Index** → **Table of Contents, Index or Bibliography...** from the Menu bar.

Step 4: The dialog appears with the **Type** tab active by default. Set the Title (default is *'Table of Contents'*), check **Protected against manual changes** (to prevent accidental overwrites), and set evaluation levels (default is 10).

Step 5: Click **OK**. The ToC generates instantly. *(Note: If the generated ToC appears completely blank, it means the author forgot to apply Heading styles to the document text!)*.

B. The 5 Tabs of the Table of Contents Dialog Box:

Tab Name	Functional Scope & Configurable Options
1. Type	Sets Title of ToC, document scope (entire document or chapter), evaluation levels (up to 10), and 'Protected against manual changes' checkbox.
2. Entries	Configures elements for each level via the **Structure Line**: E# (Chapter number), E (Entry text), T (Tab stop), # (Page number), LS (Link start), LE (Link end). Assigns Character Styles.
3. Styles	Allows assigning different paragraph styles to individual ToC evaluation levels to alter font typography, spacing, and indentations.
4. Columns	Formats the Table of Contents to display across multiple columns (e.g., 2 or 3 columns) with custom width, spacing, and separator lines.
5. Background	Adds a background color or graphic/image to the entire Table of Contents block (or set to None).

C. Maintaining, Updating and Deleting a ToC:

- **Updating a ToC:** Writer does **not** automatically update the ToC when headings or page numbers change. To refresh it: Right-click anywhere inside the ToC → Choose **Update Index** from the context menu.
- **Deleting a ToC:** Click inside the ToC → Right-click to open context menu → Choose **Delete Index**. The ToC is deleted immediately.
- **Customizing Existing ToC:** Right-click inside the ToC → Choose **Edit Index** to re-open the 5-tab dialog.

3. Using and Managing Templates in LibreOffice Writer

Definition: A **Template** is a pre-designed master blueprint or dummy document that stores formatting features (styles, headers/footers, margins, tables, company logo, macros) based on which new documents can be created with an identical look and feel.

- **Key Advantages:**
  1. *Simplifies Document Creation:* Ready-made styles and layouts avoid setting up documents from ground zero.
  2. *Saves Time & Effort:* Accelerates formatting workflows for recurrent documents (e.g., invoices, minutes, project reports).
  3. *Consistency & Standardization:* Guarantees brand identity and layout uniformity across an entire organization.
- **File Extensions & Storage:**
  - *Template Extension:* **.ott** (ODF Text-Document Template). Standard Writer document is **.odt**.
  - *Custom Templates Storage:* Stored in LibreOffice's internal user directory under folder *User's Templates / My Templates*.
- **Keyboard Shortcut:** Press **Ctrl + Shift + N** to open the *Templates* dialog box (or menu **File** → **Templates** → **Manage Templates**).

A-1 NOTES IT-402

- **Two Ways to Create Templates:** 1. From a document, 2. Using a Wizard.

Complete Practical Procedures for Managing Templates:

- **1. Creating a Template from a Document:** Open document → Format styles, margins, headers, logos → Choose **File** → **Templates** → **Save as Template...** → Enter Template Name → Select Category (e.g., *My Templates*) → Check *'Set as default template'* (optional) → Click **Save**.
- **2. Using In-built / Saved Templates:** Choose **File** → **New** → **Templates...** (or **Ctrl + Shift + N**) → Select category filter → Double-click desired template (or select and click **Open**) → New untitled document opens based on that template.
- **3. Using Online Templates:** Open Templates dialog (**Ctrl + Shift + N**) → Click **Manage** dropdown → Select **Extensions** → Browse online template repository → Click link to download → Double-click downloaded file to install into LibreOffice.
- **4. Importing a Template:** Open Templates dialog (**Ctrl + Shift + N**) → Click **Manage** dropdown → Select **Import** → Choose category folder for imported file → Click OK → Browse and select .ott file on disk → Click **Open**.
- **5. Editing an Existing Template:** Open Templates dialog (**Ctrl + Shift + N**) → Right-click on template → Select **Edit** → Make modifications → Save (**Ctrl + S**) and close.
- **6. Moving a Template:** Open Templates dialog (**Ctrl + Shift + N**) → Right-click template → Select **Move** → Choose destination category folder → Click **OK**. *(Internal reorganization only)*.
- **7. Exporting a Template:** Open Templates dialog (**Ctrl + Shift + N**) → Right-click template → Select **Export** → Choose target external folder on computer/USB drive → Click **Select Folder**. *(Saves an external .ott file for backup/sharing)*.
- **8. Setting & Resetting Default Template:**
  - *Set as Default:* Open Templates dialog → Right-click desired template → Select **Set as Default**. (New blank documents created via **Ctrl + N** inherit this template).
  - *Reset to Original Default:* Open Templates dialog → Click **Manage** dropdown → Select **Reset Default Template** → **Text Document**.

4. Track Changes & Document Reviewing (Collaborative Editing)

Definition: Track Changes is an editing feature that monitors, highlights, and records all textual additions, deletions, formatting changes, and comments made by reviewers, along with author name and timestamp. **Reviewing** involves examining these proposed modifications and deciding whether to accept or reject them.

- **Key Benefits:** 1. *Improved Collaboration:* Multiple contributors review without overwriting each other's work. 2. *Clear Revision History & Transparency:* Shows who edited what and when. 3. *Editorial Control:* Original author/owner approves or discards changes. 4. *Feedback Communication:* Notes/comments explain justifications.
- **Visual Markups Used by Writer:**
  - *Insertions:* Newly added text is displayed in a distinct reviewer-specific color and is **underlined**.
  - *Deletions:* Removed text remains visible but is displayed with a **strikethrough** in the reviewer's color.
  - *Formatting Changes:* Font/style modifications are documented with margin markers.
  - *Comments:* Non-printing notes anchored to text selections appearing in the **right-hand margin area**.

Complete Practical Procedures for Track Changes:

- **1. Preparing Document for Review (Enabling & Protecting):**
  - *Enable Recording:* Choose **Edit** → **Track Changes** → **Record** (or click Record icon on toolbar, or press **Ctrl + Shift + C**). A checkmark appears next to *Record*.
  - *Protect with Password:* Choose **Edit** → **Track Changes** → **Protect...** → Enter and confirm password → Click OK. (Prevents reviewers from disabling tracking or accepting their own edits).
  - *Stop Recording:* Choose **Edit** → **Track Changes** → **Record** again to toggle off.
- **2. Adding & Deleting Comments:**
  - *Add Comment:* Select text → Choose **Insert** → **Comment** (or press **Ctrl + Alt + C**) → Comment box appears in **right-hand margin** with author name & timestamp → Type note.
  - *Delete Comment:* Click the downward triangle in the bottom-right of the comment box in the margin → Select **Delete Comment** (or *Delete Comment Thread* / *Delete All Comments*).
- **3. Reviewing & Accepting/Rejecting Changes:**
  - *Show/Hide Markups:* Choose **Edit** → **Track Changes** → **Show**.
  - *Manage Changes Dialog:* Choose **Edit** → **Track Changes** → **Manage...**. The dialog lists all uncommitted edits showing Action, Author, Date & Time, and Comment.
  - *Action Buttons:* Click **Accept** (keeps modification), **Reject** (reverts to original text), **Accept All** (approves all edits), or **Reject All** (discards all edits).
- **4. Comparing Documents:**
  - *When to Use:* When reviewers made changes to a separate file copy *without turning on Track Changes*.
  - *Procedure:* Open original (or edited) file → Choose **Edit** → **Track Changes** → **Compare Document...** → Select second file → Click Open → Calc/Writer opens *Manage Changes* dialog showing differences as tracked edits.
- **5. Merging Documents:**
  - *When to Use:* When multiple reviewers independently edited separate copies of the same file with Track Changes enabled.
  - *Procedure:* Open original file → Choose **Edit** → **Track Changes** → **Merge Document...** → Select edited copy → Edits from both reviewers are pulled into master file for combined review.

DAV GVM IT-402 STUDY MATERIAL

5. Master High-Yield Comparative Matrices

Comparison Parameter	Moving a Template	Exporting a Template
Scope of Operation	Changes the internal category folder within LibreOffice's internal template library.	Saves an independent copy of the .ott file to an external folder or disk drive.
File Location	Remains inside LibreOffice user directory path; no external file is generated.	Exported to user-chosen path (e.g., Desktop, USB drive, network share).
Primary Purpose	Reorganizing templates into categories (e.g., from *My Templates* to *Business Correspondence*).	Sharing template with colleagues via email/pendrive or making a disk backup.
